

Letz Manage

A single-organization, multi-branch office space booking and management system built with Laravel, Livewire, and Tailwind CSS.

Live: <https://letzmanage.com>

Features

- **Multi-branch support** — manage multiple branches under one organization
- **Office space management** — spaces with photos, types, capacity, and facilities
- **Parent-child space conflicts** — booking a hall automatically blocks its sub-rooms, and vice versa
- **Guest booking** — public 3-step wizard at `/book` (no account required)
- **Staff booking** — internal booking from the admin dashboard
- **Approval workflows** — manual or auto-approval, configurable globally or per branch
- **Role-based access** — Admin, Manager, and Staff roles with scoped permissions
- **Email & Telegram notifications** — on booking submission, approval, and rejection
- **Organization branding** — configurable name and logo shown on the public booking page
- **Calendar view** — visual booking calendar for admins and managers

Tech Stack

Layer	Technology
Framework	Laravel 13
Frontend	Livewire 3 + Livewire Volt
Styling	Tailwind CSS (via Vite)
Database	MySQL (production)
Auth	Laravel Breeze
Notifications	Laravel Mail + Telegram Bot API
Hosting	Hostinger Shared Hosting (PHP 8.4)

Booking Workflow

Guest

Visit `/book`

- Choose a space
- Pick date & time

- Fill in details (name, email, phone, purpose)
- **Submit**
- Receive confirmation email
- Admin reviews **and** approves or rejects
- Receive approved / rejected email

Admin / Manager

- Receive notification (email + Telegram)
- Log **in to** dashboard
 - Go **to** Bookings
 - Approve (**with optional** note) **or** Reject (**with optional** reason)
 - Requester **is** notified automatically

Approval Modes

Mode	Behaviour
Manual	Bookings start as Pending and require admin or manager approval
Auto	Bookings are immediately approved on creation

Configurable globally or per branch under **Admin** → **Settings**.

Space Conflict Rules

- Only **Approved** bookings block time slots — Pending bookings may overlap
- Booking a **parent space** (e.g. Hall) blocks all its **sub-spaces** (e.g. Meeting Room 1 & 2)
- Booking a **sub-space** blocks its **parent only** — sibling sub-spaces remain independently bookable
- Overlap is re-checked at approval time to handle race conditions

Roles & Permissions

Role	Access
Admin	Full access — all branches, users, settings, bookings
Manager	Manage spaces and bookings for their branch; approve/reject
Staff	Create bookings for their branch; view own bookings
Guest	Submit booking requests via the public <code>/book</code> page

Local Development Setup

Requirements

- PHP 8.4+
- Composer
- Node.js + npm
- MySQL or SQLite

Steps

```
git clone https://github.com/faristodox/letzmanage.git
cd letzmanage

composer install
npm install

cp .env.example .env
php artisan key:generate

# Configure your DB in .env, then:
php artisan migrate --seed
php artisan storage:link

npm run dev
```

Default seeded admin account:

- **Email:** admin@letzmanage.test
- **Password:** password

Production Deployment (Hostinger Shared Hosting)

```
ssh -p 65002 u997806794@194.163.35.5

cd ~/letzmanage

# Pull latest changes
git pull

# Run if schema changed
/opt/alt/php84/usr/bin/php artisan migrate --force

# Run if blade files changed
/opt/alt/php84/usr/bin/php artisan view:clear
```

```
# Run if .env changed
/opt/alt/php84/usr/bin/php artisan config:clear
```

Vite assets (`public/build/`) are committed to git since the server has no Node.js.
Build locally with `npm run build` before pushing.
